FRES Green Team

The FRES Green Team is working hard to learn about our environment and what we can do to become good stewards of our environment. Along with providing ideas and activities for our staff and student community, the Newsletter Committee of the Green Team will be sharing information about our environment to the FRES community. We hope you learn something new about our environment too!

Green Team Insights:

We are all responsible for taking care of our environment and helping our Earth to stay healthy. Understanding what happens when we pollute should help us to make better decisions for each other and our environment.

Here's some information about the watershed we live in:

The Chesapeake Bay is one of our greatest resources. The Chesapeake Bay Watershed extends into 6 different states and it covers 64,000 square miles. The Chesapeake Bay Watershed is bigger than most other watersheds. When it rains the water flows from the mountains into our streams and rivers. On this journey, the water pulls trash and pollution into streams and rivers. The streams and rivers eventually lead to the bay. The pollution that is carried in the streams and rivers ends up in the Chesapeake Bay. Things that go down storm drains also lead to the bay. If you take care of other bodies of water you can take care of the Chesapeake Bay. So be mindful of where you put your trash.
